Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

!
 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence encodes the humanized mouse antibody 21.6 light chain variable region, La, directed against leukocyte adhesion molecule VLA-4. Cloned cDNA sequences of mouse 21.6 VL and VH (AAQ99889 and 2C AAQ998892) regions are linked to human constant regions in the 2C construction of a humanized antibody against VLA-4. The 5' and 3' C ends of the mouse cDNAs are modified using PCR primers (See AAQ99895-98) and then subcloned into mammalian cell expression vectors CC containing human kappa or gamma-1 constant regions. In the humanized Clight chain, amino acids L45, L49, L58 and L69 in the humanized CC light chain, amino acids L45, L49, L58 and L69 in the humanized CC vR framework are replaced by the amino acid present in the equivalent CC position of the mouse 21.6 Ig L chain. Plasmids encoding the chimeric CC can be used for inhibiting adhesion of a leukocyte to an endothelial CC cell and for treating inflammatory diseases such as multiple CC cerebral traumas, meningitis or encephalitis. The antibodies can corebrating anti-lairous antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches 106;

This polypeptide, designated La, comprises the light chain variable cregion (VL) of a humanised alpha-4 integrin antibody 21.6. It is CC composed of complementarity determining regions (CDRs) from the VL CC region (see AAW22409) of mouse alpha-4 integrin monoclonal antibody C21.6 and a modified human REI framework. It can be expressed in CC mammalian host cells following PCR amplification and mutagenesis CC of appropriate fragments of mouse and human DNA sequences. The CC to produce a claimed humanised 21.6 VH (see AAW22413) can be used CC to produce a claimed humanised 21.6 antibody that is useful in the CC manufacture of a medicament for treating asthma, atherosclerosis, CC AIDS, dementia, diabetes, inflammatory bowel disease, rheumatoid CC arthritis, transplant rejection, graft versus host disease, tumour CC metastasis, nephritis, atopic dermatitis, psoriasis, myocardial CC ischaemia, and acute leukocyte mediated lung injury. The antibody CC may also be used in the affinity purification of alpha-4 integrin CC for use as a vaccine or an immunogen. It is also useful for generating idiotypic antibodies. The humanised antibody has a CC half-life in the human circulation essentially equivalent to that CC of naturally occurring human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 25; Fig 6; 107pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         expressed in mammalian host cells following PCR amplification and mutagenesis of appropriate mouse and human DNA sequences. The humanised 21.6 VL and a humanised 21.6 vH (see AMV2413) can be used to produce a claimed humanised 21.6 antibody that is useful in the manufacture of a medicament for treating asthma, atherosclerosis, AIDS, dementia, diabetes, inflammatory bowel disease, rheumatoid arthritis, transplant rejection, graft versus host disease, tumour metastasis, nephritis, atopic dermatitis, psoriasis, myocardial ischaemia, and acute leukocyte mediated lung injury. The humanised antibody has a half-life in the human circulation essentially equivalent to that of naturally occurring human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This polypeptide, designated La, comprises the light chain variable region (VL) of a humanised alpha-4 integrin antibody 21.6 (see also AAW22412). It is composed of complementarity determining regions in the VL region (see AAW22409) of mouse alpha-4 integrin monoclonal antibody 21.6 and a modified human REI framework. It can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 1997-297879/27.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence represents the mouse anti-VLA-4 antibody 21.6 light chain carriable region (without signal sequence). Cloned cDNA CDR sequences of constant framework regions of the REI antibody for the light chain and constant framework regions of the REI antibody for the light chain and constant framework regions of the REI antibody for the light chain and constant framework regions of the mouse cDNAs are modified using PCR primers (See AAQ9895-98) and then subcloned into constant regions. In the humanized light chain, amino acids L45, L49, cc constant regions. In the humanized light chain, amino acids L45, L49, cc constant regions. In the humanized light chain, amino acids L45, L49, cc caid present in the equivalent position of the mouse 21.6 Ig light cc chain. Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used to inhibit adhesion of a cc smultiple sclerosis. They can also be used in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VLA-4, for affinity purification or for generating anti-lairtene anti-bodies.

modified using PCR primers (See AAQ99895-98) and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized light chain, amino acids L45, L49, L58 and L69 in the human kappa LC VR framework are replaced by the amino acid present in the equivalent position of the mouse 21.6 Ig L chain. Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used to inhibit adhesion of a leukocyte to an endothelial cell and
                                                                                                                                                                                                                                                                                                                                                                                                        The sequence represents the mouse antibody 21.6 light chain variable region directed against leukocyte adhesion molecule VLA-4. Cloned CDNA sequences of mouse 21.6 VL and VH (see AAQ99892) regions are linked to human constant regions in the construction of a humanized antibody against VLA-4. The 5′ and 3′ ends of the mouse cDNAs are
                    to treat inflammatory diseases such as multiple sclerosis. They can also be used in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VLA-4, for affinity purification or for generating
anti-idiotype antibodies.

      The sequence represents the human reshaped antibody 21.6 light chain variable region against leukocyte adhesion molecule VIA-4. Cloned cDNA sequences of mouse 21.6 VL (AAQ99889) and VH (AAQ99892) regions are linked to human constant regions in the construction of a humanized antibody against VIA-4. The 5' and 3' ends of the
                                                                                                                                                                                                                                                                    Regior

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized light chain, amino acids L45, L49, L58 and L69 in the human kappa LC VR framework are replaced by the amino acid present in the equivalent position of the mouse 21.6 Ig L chain. Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used to inhibit adhesion of a leukcyte to an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Alpha-4 integrin; humanised antibody; monoclonal antibody 21.6; asthma; atherosclerosis; AIDS; dementia; diabetes; tumour; metastasis; inflammatory bowel disease; rheumatoid arthritis; transplant rejection; graft versus host disease; nephritis; atopic dermatitis; psoriasis; myocardial ischaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VLA-4, for affinity purification or for generating anti-idiotype antibodies.

The complementarity determining regions (CDRs) of the 21.6 VL can be Complementarity determining regions (CDRs) of the 21.6 VL can be Complementarity determining regions (CDRs) of the 21.6 VL can be Complementarity determining regions (CDRs) of the 21.6 VL can be Complementarity determining a claimed humanised 21.6 Complementarity and a claimed humanised 21.6 Complementary between the complementarity and a chaimed humanised 21.6 Complementary determining a disease selected from asthma, atherosolerosis, AIDS, Complementary determining a disease, inflammatory bowel disease, rheumatoid arthritis, transplant rejection, graft versus host disease, tumour complementaries, atopic dermatitis, pooriasis, myocardial complementaries, and acute leukocyte mediated lung injury. The antibody complementaries are vaccine or an immunogen. It is also useful for generating idiotypic antibodies. The humanised antibodies of the complementaries humanised antibodies of the complementaries that the complementaries are the complementaries.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes fusion proteins comprising a chemokine and a tumour antigen or HIV antigen. Specifically claimed fusion proteins comprise: (1) human monocyte chemotactic protein 3 (MCP-3) and human Muc-1; (2) human interferon induced protein 10 (IP-10) and human Muc-1; (3) human macrophage-derived chemokine (MDC) and human Muc-1; (4) human SDF-1 and human Muc-1; (5) human IP-10 and HIV gpl20; (7) human MDC and HIV gpl20; and (8) human SDF-1 and HIV gpl20. The fusion proteins, and nucleotide sequences encoding them, can be used for producing an immune response, e.g. an effector T cell immune response. They can also be used for treating cancer or treating or preventing HIV infection. The fusion proteins and/or nucleotide sequences can be used in in vitro diagnostic assays, as well as in screening assays fumour antigen epitopes and fine mapping of tumour antigen epitopes and fine mapping of fumour antigen epitopes and fine mapping of invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes fusion proteins comprising a chemokine and a tumour antigen or HIV antigen. Specifically claimed fusion proteins comprise: (1) human monocyte chemotactic protein 3 (MCP-3) and human Muc-1; (2) human interferon induced protein 10 (IP-10) and human Muc-1; (3) human interferon induced protein 10 (IP-10) and human Muc-1; (4) human SDF-1 and human MCP-3 and HIV gpl20; (7) human MCP-3 and HIV gpl20; (7) human MCP-3 and HIV gpl20; (7) human MCP-3 and nucleotide sequences encoding them, can be used for producing an immune response, e.g. an effector T cell immune response. They can also be used for treating cancer or treating or preventing HIV infection. The fusion proteins and/or nucleotide sequences can be used in in vitro diagnostic assays, as well as in screening assays for identifying unknown tumour antigen epitopes and fine mapping of tumour antigen epitopes. The present sequence represents a fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; Page 115-116; 142pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes fusion proteins comprising a chemokine and a tumour antigen or HIV antigen. Specifically claimed fusion proteins comprise: (1) human monocyte chemotactic protein-3 (MCP-3) and tuman Muc-1; (2) human interferon-induced protein 10 (IP-10) and human Muc-1; (2) human interferon-induced protein 10 (IP-10) and human Muc-1; (3) human macrophage-derived chemokine (MDC) and human Muc-1; (4) human SDF-1 and HIV gpl20; (6) human IP-10 and HIV gpl20; (6) human SDF-1 and HIV gpl20; (7) human MDC and HIV gpl20; and HIM gpl20; (1) human sDF-1 and MIV gpl20. The fusion proteins, and nucleotide sequences encoding them, and be used for producing an immune response, e.g. an effector T cell commune response. They can also be used for treating gancer or treating cor preventing HIV infection. The fusion proteins and/or nucleotide sequences can be used in in vitro diagnostic assays, as well as in screening assays for identifying unknown tumour antigen epitopes and fine mapping of tumour antigen epitopes. AAY2916 and AAZ21168 are sequences given in the SEQ ID LISPING in the present invention but which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This is an example of a CDR-grafted light chain of the invention. The constant regions are based on sequences of the human kappa constant domain, the signal sequence is derived from murine MAD B72.3 and the CDR sequences are based on the murine OKT4A light chain CDRs. The recombinant antibody encoded by this sequence has affinity for CD4 similar to that of OKT4A.
                                                                                                                                                                                                                                                                                                                                                                                 21-DEC-1995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     guanidine isothiocyanate. First strand cDNA synthesis was catalysed by MuLv reverse transcriptase. The primers used for cDNA synthesis were complementary to the 5' end of the CH1 domain of the heavy chain expressed by the hybridoma of interest, or to the 5' and of the C kappa domain. Some of the primers used for cDNA synthesis are shown in AAQ97511-Q97518. The primer used for cDNA synthesis of the cariable region of a particular antibody polypeptide was also used for PCR amplification of that variable region, in conjunction with an appropriate v-region primer. In addition, the VH primer AAQ97518 was used to amplify the mab 2D5 and 5B6 heavy chains. The sequences of the PCR amplified nucleotides were determined. These are given an AAQ97918-Q97510 and the deduced AA sequences in AAR79241-R79250 & C AAR78970-R78971. The descriptions of the SEQ ID nos given on pp 44-45 and in the claims are different from the descriptions in the sequence listings are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

The antibody recognises the beta I subunit (CD29) of integrins and inhibits activation and proliferation of peripheral T cells induced by anti-CD3 antibodies. Monoclonal antibody K20 is a preferred target for humanisation; the humanisation may be useful as an immunosuppressant. In the humanisation process, the complementarity determining regions (CDRs) of a human antibody with framework regions 70-95% homologous to those of K20 were replaced by the K20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Region

        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                          448.5
